Doctor's Personal Note: A Message From Your Doctor

Thank you for visiting our website and viewing our 3D Animation Library. These animations should assist you in better understanding your condition or procedure. We look forward to answering any additional questions you may have at our next appointment.

Incision

Small incisions (portals) are made around the joint. The scope and surgical instruments will go into these incisions.

Visualization

The scope is inserted into the knee. Saline solution flows through a tube (cannula) and into the knee to expand the joint and to improve visualization. The image is sent to a video monitor where the surgeon can see inside the joint.

Diagnosis

Using the video monitor as a guide, the surgeon can make a diagnosis. A variety of surgical instruments like this probe can be inserted through other incisions to treat specific problems.

End Of Procedure

The surgical instruments are removed and the procedure is completed.
